

The first testing round tested if WhereWear can turn occasion-led booking through trust and fit confidence.

**Objective**

1

Trust

Does the occasion-to-booking journey build enough trust to rent from a stranger

2

Comprehension

Are fees and terms - deposit, cleaning, delivery, service fee - understood before booking

3

Functional fit

Does navigation + fit-proof info let her decide without help

**Hypotheses tested this round:** Protocol §7 - one overall scenario; some participants used the AI chatbot, others navigated directly.

#	Hypothesis
H1	Occasion-first entry is more intuitive than catalogue/search-first for a user with a specific event in mind
H2	AI chatbot support helps users define the event context and move into discovery
H3	Fit-proof info - photos, fit notes, condition - gives enough confidence to commit
H4	Owner confidence indicators - profile, reviews, wardrobe style - reduce hesitation
H5	Rental rules visible before booking reduce post-booking anxiety rather than causing abandonment
H6	Full journey completes in under 8 minutes

**Panel:** Protocol §2 - recruitment target, not per-session confirmed demographics

Field	Target
Primary persona	Sophie Laurent, Occasion Seeker - women 28-42, major city, 3+ events/year
Secondary guardrail	Hannah-aligned - Controlled Minimalist; Nelly-aligned - Expressive Explorer, 1-2 each
Recruitment	Personal network, snowball sampling, screened by questionnaire
Tested	5 of 7 planned, 20-29 Jun 2026

**Protocol:** Protocol §3-§6

Field	Duration	Content
Welcome & intro	5 min	Presentation, objectives, recording consent
Briefing	5 min	Think-aloud rules, no right/wrong answers
Scenario	40 min	1 scenario to test
Debrief & post-test	10 min	SUS + WhereWear items, open questions

Overall, testing shows positive booking path, but confidence breaks out on fees and fit and the prototype needs further fine tuning.

Verbatims by theme

Theme	Quote	Participant
Price/fees	"What the hell is service fee?"	553695971
Price/fees	"I'm only finding it out here that I need to pay deposit."	553695971
Price/fees	"If I need it for a week, is it still 65?"	553293903
Fit/sizing	"I have no idea what I am. I look at chest 96, and I say, god, what am I?"	553293903
Fit/sizing	"I still can't do my size, but okay."	555796148
Positive	"Everything is clear here... I will have my perfect dress for the wedding."	553744729

Quantitative

Participant	Success	Time on task	Errors/retries
553293903	Completed	~27m 44s	4
553695971	Completed	~8m 31s	4
553744729	Completed	~7m 26s - task only	1
555796148	Completed	~7m 20s - truncated	5
556464047	Completed	~7m 14s - truncated	4

Hypothesis verdict

Hyp.	Verdict	Evidence
H1	Supported	All 5 used occasion-first entry without confusion; never a named friction point
H2	Partially evidenced	Some participants used the AI chatbot; path-level evidence needs isolating
H3	Partially supported	Worked for 3/5; 2/5 hit real fit-confidence gaps
H4	Supported where seen	Reviews and ratings cited positively; zero owner distrust
H5	Not supported	Fees and deposit surfaced too late; 2/5 guessed the cancellation policy
H6	Inconclusive	Only 1/5 cleanly confirms under 8 min; 2/5 recordings were truncated

These insights define the key V2 priorities: make the journey more guided, reassure users earlier, and keep fit, pricing and booking controls visible until confirmation.
