

A combination of collaborative, analytical and AI-powered **tools** supported through the end-to-end delivery of the UX strategy.

Tool		Usage
	Mural	Used to conduct collaborative brainstorming sessions, including How Might We workshops and Value Proposition Canvas exercises.
	GitHub	Used as a platform to share and structure core project outputs, including HMW session details and UX research screening results.
	Claude AI	Used to build an interactive dashboard to visualize screening results and user profiles.
	OpenAI	Used to record interview scripts in users' native language (English or Russian) and translate them into French.
	Microsoft Teams	Used to conduct remote user interviews, alongside face-to-face interviews for respondents based in France.
	Google Drive	Used to store, organize and share project materials and deliverables.
	Microsoft Excel	Used to structure interview data, verbatims and perform analysis for UX research.
	Microsoft Word	Used to document interview scripts and research synthesis.

Tool		Usage
	Power Point	Used to construct the end-to-end UX strategy long read, structure the project storyline, and prepare the final pitch for the jury presentation.
	Figma	Used to translate the IA and user flows into zoning, low-fidelity wireframes, connected screen flows, and the first clickable prototype.
	Maze	Maze was used to run user testing, collect participant feedback and analyze how users navigated through the prototype.
